TodoList using Nodejs and MongoDB

For t**emplating** i have used **Ejs(Embedded javascript Template)**
Rest api's are made using **express server** .There are 4 api's in total:

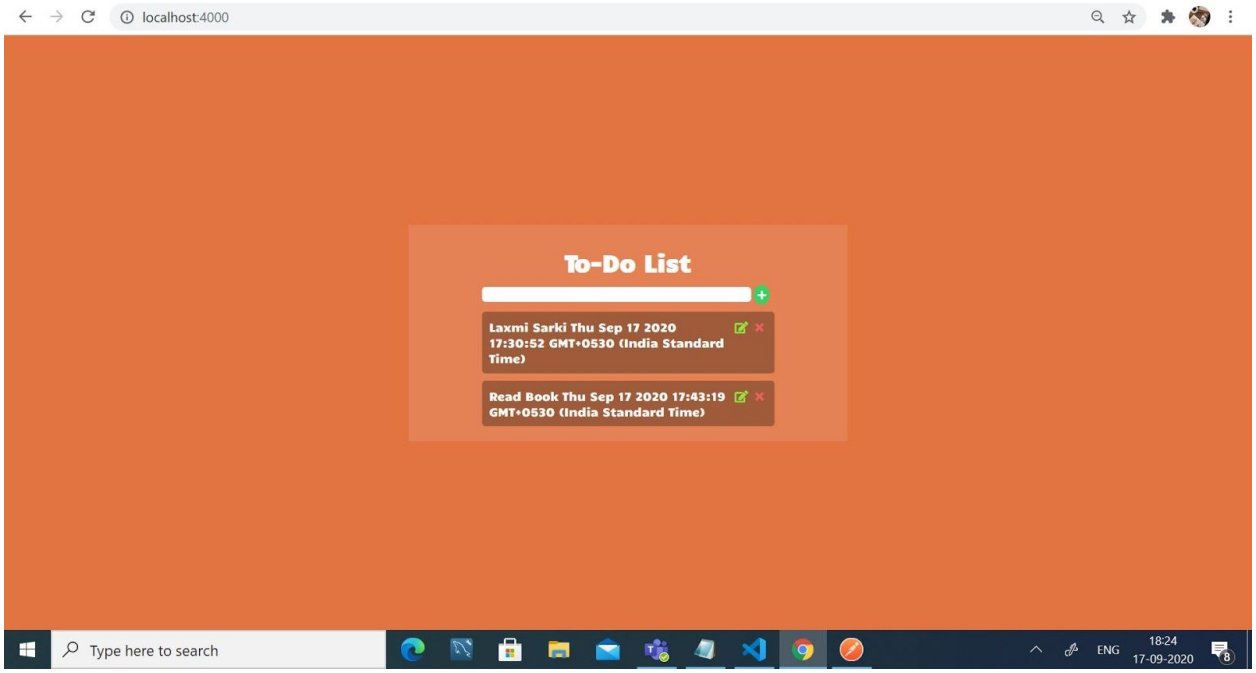
- **Adding Todo's to DB**
- **Fetching Todo's from DB**
- **Updating Todo's**
- **Deleting Todo's**

We are using MongoDB in the Backend .

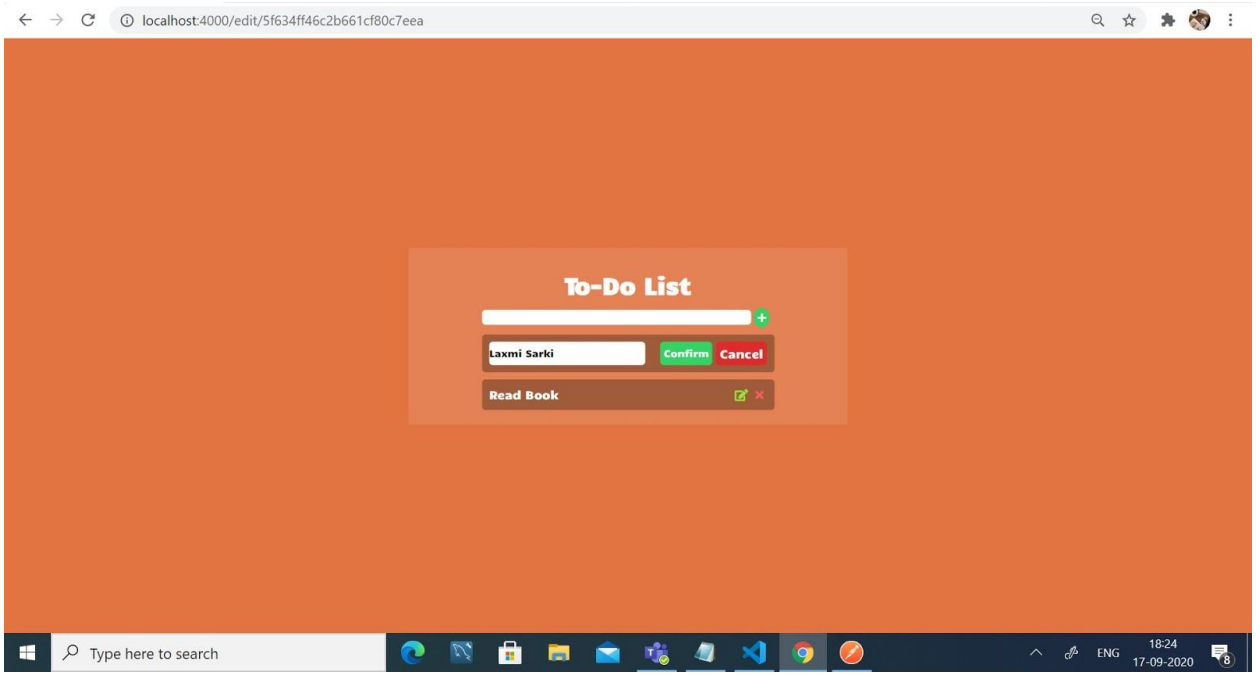
Setup:
Steps :

- Get till `TODO_LIST_USING_NODEJS_MONGODB` directory and then do "npm install" to requirements
- run "node server.js"
- Go the browser "localhost:4000"

You see below Interface:



Displayed : Todos are from DB



localhost:4000/edit/5f634ff46c2b661cf80c7eea
